

Ceramic Rust Solvent with Freeze-Shock Effect

Description

Rapidly frees seized bolts and nuts. The freeze shock that occurs when spraying on breaks open the rust on the surface so as to allow the product to better penetrate even the tightest of spaces. The micro ceramic particles contained provide for low friction and improve the lubricating action when loosening bolts and nuts. Also prevents the build-up of corrosion and does not attack plastic, paint or metal.

Properties

- does not attack plastics, paints and metals
- dissolves rust
- good water separation
- penetrates fast
- good corrosion protection
- low coefficient of friction

Technical data

Base	Ölkombination, Wirkstoffe, Mikrokeramik / Combination of oils, agents and microceramics
Color / appearance	weiß / white
Density at 20 °C	0,59 g/cm ³ DIN 51757

Areas of application

For freeing rusted and corroded metal parts such as screws, bolts and other moving parts in factories and workshops, as well as for hobbies and in the household.

Application

Spray a generous amount onto bolts or nuts to be loosened, then briefly allow the product to act (commensurate with the degree of corrosion build-up, as is common with all rust solvents) before loosening. Repeat the process in extreme cases.

Available pack sizes

300 ml Can aerosol	1641 D-GB-I-E-P
300 ml Can aerosol	2847 GB-DK-FIN-N-S
